Former Bill Brings National Lung Cancer Awareness Campaign To Buffalo

Buffalo, New York (June 21, 2012) – This week, former Buffalo Bills linebacker, Chris Draft, will return to Buffalo as part of Team Draft’s national campaign to change the face of lung cancer, the disease that claimed the life of Draft’s late wife, Keasha, last December.

Team Draft, an initiative of the Chris Draft Family Foundation, is dedicated to raising lung cancer awareness and increasing badly needed research funding by shattering the misconception that lung cancer is a “smoker’s disease.” The fact is, anybody can get lung cancer. Yet, despite the fact that between 20,000 and 30,000 people who have never smoked—including Keasha—are diagnosed with lung cancer in the United States each year, the smoking stigma negatively impacts lung cancer research funding, which pales in comparison to funding for other major cancers and diseases. Team Draft is out to change all that. “If we can take away the stigma that says you have to be a smoker to get lung cancer, we have a real chance to educate people about the true nature of the disease,” explains Draft.

Since Chris and Keasha launched Team Draft at their wedding in November of last year, Team Draft has been on a mission to tackle cancer. Team Draft’s national campaign to raise public awareness and share the hope that now exists for people diagnosed with the disease has taken it to more than a dozen states and nearly 35 of the top cancer research and treatment facilities in the country.

“Our hope is not only to positively impact research funding, but to improve the quality of life for those affected by lung cancer,” says Draft. “We aren’t fighting against lung cancer, we’re fighting for people. That’s why we are leading this national campaign to change the face of lung cancer.” And this week, Team Draft is bringing the campaign to Buffalo.

On Friday, June 22, Team Draft will visit Roswell Park Cancer Institute where we will meet with Dr. Mary E. Reid, one of the directors of the Stacey Scott Lung Cancer Registry. The Registry was named for Stacey Scott, a young women who, like Keasha, was an active, athletic non-smoker when she was diagnosed with lung cancer in 2005. Scott lost her battle with the disease four months later. The Registry collects and stores biological samples and data from lung cancer patients at participating cancer centers in the United States, Canada, and Europe, which are made available to doctors and scientists around the world conducting cutting-edge research leading to breakthroughs in the early detection and treatment of lung cancer.

Later that day, Team Draft will head to the University of Buffalo football stadium to participate in the inaugural Ride For Roswell Opening Ceremony. 10,000 people are expected to attend the event, which begins at 5:30 and kicks off Saturday’s Ride for Roswell, a twenty-mile charity bike ride supporting cancer research and patient care at Roswell Park.
Next week, Team Draft takes the campaign to Ohio to visit the Cleveland Clinic before traveling to Canton for the NFL’s Rookie Symposium where Draft will speak to this year’s rookie class about the importance of being a leader both on the field, and in the community.

**The Facts About Lung Cancer**

For decades, the facts regarding lung cancer have been sobering:

- Anyone can get lung cancer.
- Over 60% of lung cancers are diagnosed in people who never smoked or in former smokers.¹
- Lung cancer surpassed breast cancer as the #1 cancer killer for women in 1987.²
- Lung cancer kills more people than any other cancer³, and takes more lives than breast, cervical, and prostate cancers . . . combined.⁴
- The five year survival rate for lung cancer is just 16%—a rate that has changed very little since the 1970’s.⁵

But now there is HOPE! The use of state-of-the-art lung cancer screening techniques is reducing mortality rates by 20% in some patient groups⁶ while cutting-edge team-based, multidisciplinary treatment procedures are improving the quality of life for lung cancer patients across the country. And thanks to advances in molecular tumor mutation testing, researchers and treating physicians are developing effective personal lung cancer treatments designed to extend and, ultimately, save lives.⁷ The key to making even greater strides is funding, but funding for lung cancer research is impacted by the “smoker’s disease” stigma.⁸ That’s why Team Draft is campaigning to change the face of lung cancer.

**About The Chris Draft Family Foundation and Team Draft**

The Chris Draft Family Foundation is a 501(c)(3) non-profit corporation dedicated to strengthening communities by empowering families to live healthy lifestyles. The Foundation focuses on several initiatives with overarching themes that stress the importance of education, healthy lifestyles, character development, personal responsibility, self-discipline, and physical fitness. To learn more about the Foundation, please visit www.chrisdraftfamilyfoundation.org.

Through its Team Draft initiative, the Foundation is carrying on Keasha’s fight to tackle cancer by promoting awareness, research, and scholarship and to save lives by changing the face of lung cancer. Team Draft is dedicated to raising awareness, accelerating research for a cure, and giving hope, comfort, and inspiration to the patients, caregivers, and healthcare providers who are battling the disease every day. To learn more about Team Draft, share your story, and respond and donate, please visit
